Biological evolution is a fact--but the many conflicting theories of evolution remain controversial even today. In 1966, simple Darwinism, which holds that evolution functions primarily at the level of the individual organism, was threatened by opposing concepts such as group selection, a popular idea stating that evolution acts to select entire species rather than individuals. George Williams's famous argument in favor of the Darwinists struck a powerful blow to those in opposing camps. His Adaptation and Natural Selection, now a classic of science literature, is a thorough and convincing essay in defense of Darwinism; its suggestions for developing effective principles for dealing with the evolution debate and its relevance to many fields outside biology ensure the timelessness of this critical work.

Adaptation and Natural Selection in Caves
The harsh environment of caves--dark, damp, sparse of food--is home to a variety of "bizarre" creatures. Biologists, for their part, often treat these delicate, colorless organisms having no eyes, or at least greatly reduced eyes, as mere oddities with little to tell us about a topic as grand as evolution. Focusing on one cave-dwelling crustacean, Gammarus minus, this book shows that, to the contrary, cave life can provide a valuable empirical model for the study of evolution, particularly adapt...

Perspectives on Adaptation in Natural and Artificial Systems
This book is a collection of essays exploring adaptive systems from many perspectives, ranging from computational applications to models of adaptation in living and social systems. The essays on computation discuss history, theory, applications, and possible threats of adaptive and evolving computations systems. The modeling chapters cover topics such as evolution in microbial populations, the evolution of cooperation, and how ideas about evolution relate to economics. The title Perspectives on...

Natural Selection
Giddens brings together the best of his previously uncollected essays, including a few written expressly for this volume. Writing with insight, humor, and a famously deft touch, he offers sharp-edged perspectives on such diverse subjects as Federico Fellini, Bob Dylan, and the cartoon version of "Animal Farm."

The Evolution of Complexity by Means of Natural Selection
John Tyler Bonner makes a new attack on an old problem: the question of how progressive increase in the size and complexity of animals and plants has occurred. "How is it," he inquires, "that an egg turns into an elaborate adult? How is it that a bacterium, given many millions of years, could have evolved into an elephant?" The author argues that we can understand this progression in terms of natural selection, but that in order to do so we must consider the role of development--or more precisel...

Energy: Natural Gas: The Production and Use of Natural Gas, Natural Gas Imports and Exports, Epact Project, Liquefied Natural "Energy: Natural Gas," part of the Government Series from TheCapitol.Net The main ingredient in natural gas is methane, a gas (or compound) composed of one carbon atom and four hydrogen atoms. Millions of years ago, the remains of plants and animals (diatoms) decayed and built up in thick layers. This decayed matter from plants and animals is called organic material--it was once alive. Over time, the sand and silt changed to rock, covered the organic material, and trapped it beneath the rock. Pre...
The Idea of Natural Rights: Studies on Natural Rights, Natural Law, and Church Law 1150 1625 (Emory University Studies in Law and Religion)

This series, originally published by Scholars Press and now available from Eerdmans, is intended to foster exploration of the religious dimensions of law, the legal dimensions of religion, and the interaction of legal and religious ideas, institutions, and methods. Written by leading scholars of law, political science, and related fields, these volumes will help meet the growing demand for literature in the burgeoning interdisciplinary study of law and religion.

A Theory of Adaptation

A Theory of Adaptation explores the continuous development of creative adaptation, and argues that the practice of adapting is central to the story-telling imagination. Linda Hutcheon develops a theory of adaptation through a range of media, from film and opera, to video games, pop music and theme parks, analysing the breadth, scope and creative possibilities within each. This new edition is supplemented by a new preface from the author, discussing both new adaptive forms/platforms and recent cr...
