Free Download Advances In Production Management Systems New Challenges New Approaches Book

The present economic and social environment has given rise to new situations within which companies must operate. As a first example, the globalization of the economy and the need for performance has led companies to outsource and then to operate inside networks of enterprises such as supply chains or virtual enterprises. A second instance is related to environmental issues. The statement about the impact of industrial activities on the environment has led companies to revise processes, to save energy, to optimize transportation. A last example relates to knowledge. Knowledge is considered today to be one of the main assets of a company. How to capitalize, to manage, to reuse it for the benefit of the company is an important current issue. The three examples above have no direct links. However, each of them constitutes a challenge that companies have to face today. This book brings together the opinions of several leading researchers from all around the world. Together they try to develop new approaches and find answers to those challenges. Through the individual chapters of this book, the authors present their understanding of the different challenges, the concepts on which they are working, the approaches they are developing and the tools they propose. The book is composed of six parts; each one focuses on a specific theme and is subdivided into subtopics.

UAV Cooperative Decision and Control: Challenges and Practical Approaches (Advances in Design and Control)

Unmanned aerial vehicles (UAVs) are increasingly used in military missions because they have the advantages of not placing human life at risk and of lowering operation costs via decreased vehicle weight. These benefits can be fully realized only if UAVs work cooperatively in groups with an efficient exchange of information. This book provides an authoritative reference on cooperative decision and control of UAVs and the means available to solve problems involving them. The contributors present ...

Collaboration Systems: Technologies, Processes and Applications (Advances in Management Information Systems)

This book introduces students and general readers to the functions of international communications as well as their cultural contexts, and offers strategies for evaluating the media messages we receive through television, print media, radio, the internet, and advertising.

Production and Operations Management Systems

Since the beginning of mankind on Earth, if the "busyness" process was successful, then some form of benefit sustained it. The fundamentals are obvious: get the right inputs (materials, labor, money, and ideas); transform them into highly demanded, quality outputs; and make it available in time to the end consumer. Illustrating how operations relate to the rest of the organization, Production and Operations Management Systems provides an understanding of the production and operations management ...

Sustainable Systems and Energy Management at the Regional Level: Comparative Approaches

Conducting a systematic and comparative review of energy and environmental issues, especially at the regional and national levels, can improve communication among different disciplines and be helpful for managers, politicians, and stakeholders involved in energy and environmental systems. Sustainable Systems and Energy Management at the Regional Level: Comparative Approaches provides an interdisciplinary look at the possible relationships which exist between energy and the environment. Relevant ...

Information Systems for Emergency Management (Advances in Management Information Systems)

"Property and Prophets" is a concise history of the rise and subsequent triumph of capitalism. Focused primarily on England until 1800 and the United States since 1800, the book’s economic history is interspersed with the history of ideas that evolved along with the capitalist system.
Production Systems and Supply Chain Management in Emerging Countries: Best Practices

The book presents several highly selected cases in emerging countries where the production-logistics systems have been optimized or improved with the support of mathematical models. The book contains a selection of papers from the 5th International Conference on Production Research (ICPR) Americas 2010 held on July 21-23 in Bogota, Colombia. The main topic of the conference was "Technologies in Logistics and Manufacturing for Small and Medium Enterprises" which is perfectly aligned with the real...

Data Management for Mobile Computing (Advances in Database Systems)

Universal access and management of information has been one of the driving forces in the evolution of computer technology. Central computing gave the ability to perform large and complex computations and advanced information manipulation. Advances in networking connected computers together and led to distributed computing. Web technology and the Internet went even further to provide hyper-linked information access and global computing. However, restricting access stations to physical loca...

Cognitive Neuropsychological Approaches to Spoken Word Production

The papers in this volume all examine the nature of spoken word production in aphasia, and how this can inform current theories of language processing. It comprises 7 papers by some of the foremost researchers in the field. The first paper in the volume is an introduction by the editor (Dr Lyndsey Nickels), which reviews the 'state of the art' of the cognitive neuropsychology of spoken word production both in terms of theory and methodology. The individual papers address a range of topical issue...

Advances in the Science and Technology of Ocean Management (Routledge Advances in Maritime Research)

This book reviews key developments in the field of marine science and technology. It focuses on three major themes such as the importance of technical developments in ocean management, the application of these developments to specific sea uses ranging from fish farming to the disposal of industrial waste, and the long-term issues that such developments raise.

Critical Analysis in Decision-Making: Conventional and "Outside the Box" Approaches to Developing Solutions to Today's Business Challenges

What Linda Lawrence says about this book Whatever creativity is, it is in part a solution to a problem. Brian Aldiss (1925 - ) What is it that enables some people to make good business decisions more effectively, more often, than others? Great leaders in the public service, business, and the non-profit sectors, remind us that an effective decision-making process is the key to solving problems for any organization. Effective organizations, both large and small, search for leaders who have goo...
