Foundations for Paramedic Practice, Second Edition provides an introduction to many of the subjects not traditionally taught in ambulance 'in-house' training, such as psychology and sociology. It addresses the theoretical elements of paramedic courses in higher education and provides clear links to practice. The second edition features four new chapters on caring for vulnerable
adults, end of life issues, theories of decision making and the scope of the paramedic role. It also provides increased coverage of portfolio writing, submission to HPC, decision making and includes more case studies. Contributors Amanda Blaber, Vince Clarke, Alison Cork, Steve Cowland, John Donaghy, Rachael Donohoe, Bob Fellows, Ann French, Graham Harris, Mary Larkin, Linda Nelson, Marion Richardson, Paul Street and Jackie Whitnell.

**Foundations for Paramedic Practice**

“This book is definitely worth a read for newcomers to the paramedic profession. As for the more experienced practitioner, the book provides useful information on ‘capacity to consent’ issues and the contemporary topic of Continuous Professional Development is relevant to all experience levels ... In a nutshell, this is well written and easily digestible - a good introductory text.” Journal of Paramedic Practice, Vol 2 No5 “This book is a timely and significant contribution to the discipline of...”

**The Economics of Transport: A Theoretical and Applied Perspective**

This book provides an explanation of key underlying economic principles, allowing the reader to come to a better understanding of the critical factors that structure and guide transport markets. This is done through an examination of the interaction between the behaviour of individual users and providers of transport services and transport authorities actions through the implementation of transport policy. The book also considers on-going reforms in the organisation of all aspects of transport p...

**The Janus Fluid: A Theoretical Perspective (SpringerBriefs in Physics)**

The state-of-the-art in the theoretical statistical physics treatment of the Janus fluid is reported with a bridge between new research results published in journal articles and a contextual literature review. Recent Monte Carlo simulations on the Kern and Frenkel model of the Janus fluid have revealed that in the vapor phase, below the critical point, there is the formation of preferred inert clusters made up of a well-defined number of particles: the micelles and the vesicles. This is responsi...

**Paramedic to the Prince: An American Paramedic's Account of Life Inside the Mysterious World of the Kingdom of Saudi Arabia**

A Californian paramedic answers an advertisement for contract work at a military hospital in Saudi Arabia. So his adventure begins. This is a riveting, factual account of his ten years inside a country seldom seen by the outside world. Working on the private medical staff of King Abdullah, no western writer has ever been this close to the “House of Saud”. The author takes you on a journey from the desert camps of the Bedouin to the highest echelons of the Saudi royal family. From meetings betwee...

**Theoretical and Mathematical Foundations of Computer Science**

This book constitutes the refereed post-proceedings of the second International Conference on Theoretical and Mathematical Foundations of Computer Science, ICTMF 2011, held in Singapore in May 2011. The topics covered range from computational science, engineering and technology to digital signal processing.
Theoretical Foundations of Artificial General Intelligence

This book is a collection of writings by active researchers in the field of Artificial General Intelligence, on topics of central importance in the field. Each chapter focuses on one theoretical problem, proposes a novel solution, and is written in sufficiently non-technical language to be understandable by advanced undergraduates or scientists in allied fields. This book is the very first collection in the field of Artificial General Intelligence (AGI) focusing on theoretical, conceptual, and p...

Ultrasonic Nondestructive Testing of Materials: Theoretical Foundations

Ultrasonic Nondestructive Testing of Materials: Theoretical Foundations explores the mathematical foundations and emerging applications of this testing process, which is based on elastic wave propagation in isotropic and anisotropic solids. In covering ultrasonic nondestructive testing methods, the book emphasizes the engineering point of view, yet it relies on the physics and mathematics aspects involved in elastic wave propagation theory. As a result, this resource becomes a missing link in t...

Information and Randomness: An Algorithmic Perspective (Texts in Theoretical Computer Science. An EATCS Series)

The first edition of the monograph Information and Randomness: An Algorithmic Perspective by Cristian Calude was published in 1994. In my Foreword I said: "The research in algorithmic information theory is already some 30 years old. However, only the recent years have witnessed a really vigorous growth in this area. . . . The present book by Calude fits very well in our series. Much original research is presented. . . making the approach richer in consequences than the classical one. Remarkably...

Three-Dimensional Attached Viscous Flow: Basic Principles and Theoretical Foundations

Viscous flow is treated usually in the frame of boundary-layer theory and as two-dimensional flow. Books on boundary layers give at most the describing equations for three-dimensional boundary layers, and solutions often only for some special cases. This book provides basic principles and theoretical foundations regarding three-dimensional attached viscous flow. Emphasis is put on general three-dimensional attached viscous flows and not on three-dimensional boundary layers. This wider scope is ne...
